

FOOD PROCESSING MANAGEMENT SYSTEM**ABSTRACT**

- 5 A method and implementing system are provided in which information regarding the preparation and sale of food products and the ingredients and supplies used in the processing of such products, is recorded and used to improve the efficiency with which the food processing business is
- 10 operated. In an exemplary embodiment, a database is maintained at a restaurant server for tracking food product sales, ingredients inventories, and historical demand requirements for the food products. All of the information is processed and correlated to provide information
- 15 concerning food preparation and ingredient ordering schedules, as well as measuring and limiting measured food waste which results from normal operations of the food processing business.
